TROPICALIS_SEQUENCE_ID: TEGG022i22_plkSp6
Sequencing primer: SP6
This sequence is from a Xenopus Gene Collection (XGC) library
CONSTRUCTED by Aaron M. Zorn.
CONSTRUCTED by Aaron M. Zorn.
CONSTRUCTED trimed from 5ug of poly A+ RNA from egg.
BCORI.NoII cut cDNA was then ligated into pCS107 with EcoRI at the
Vector: pCS107, Site 1: EcoRI, Site_2: NotI
Host: Escherichia_coli_XL1-blue.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               193 GGITTGAITTCCAITCCTCTGTACAICCCTCACGTGTTGTTT---AACTGGAATTTTGGA 249

Clones are derived from the bovine BAC library CHORI-240
(http://www.chori.org/bacpac/bovine240.htm). For BAC library
availability, please contact Pieter de Jong (pdejong@mail.cho.org).
Clones may be purchased from BACPAC Resources
(http://www.chori.org/bacpac/ordering information.htm). This work
was undertaken as part of the International Bovine BAC Mapping
Consortium (IBBMC) by CSIRO Livestock Industries, Australia and the
British Columbia Genome Sciences Centre, Canada.
Seq primer: T7
Class: BAC ends.

polylinker: Site_I: Not I; Site_S: Eco RI; The library
(UI-R-B00) is a subtracted library derived from a mixture
of the following tissues: thalamus, cerebellum,
hypothalamus, medulla, pons, midbrain, cerebral cortex,
corpus striatum and hippocampus. For a detailed
description of the library from which this clone was
derived, please visit our web site at
ratest.eng.uiowa.edu. The subtraction has been previously
described in (Bonaldo, Lennon and Soares, Genome Research
6:791-806, 1996)"

/done libe "CSEQRBN20"
//done libe normalized library was constructed from limilion independent clones. CDNA synthesis was initiated using an oligo(dT) primer, using methylated C in the first strand synthesis reaction. Following this first strand reaction, double stranded CDNA was blunted, ligated to NotI adapters, digested with ECORI, size selected, and cloned into the NotI and ECORI compatible sites of a custom modified MCS of the pBluescript (Ks) vector. The library was normalized in 2 rounds using conditions adapted from Soares et al., PNAS (1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6 (1996): 791, except that a significantly longer reannealing hybridization was

The library was constructed by Claire Murphy and Dr. James McCarter at Washington University, St. Louis. The CDNA was made by using Dynabead oligo-dT priming (Dyna)]. PCR based library using a modified protocol from the SMART PCR cDNA Synthesis Kit from Clontech. Directionally cloned into the UDG sites of pAMP1. J2 were provided by Dr. Valerie
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            356

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                NOTE: This is a 'working draft' sequence. It currently consists of 4 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Baylor Plaza, Houston, TX 777030, USA
On Nov 15, 2002 this sequence version replaced gi:23812823.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Submitted (17-APR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Histamine H4 receptor; mouse; antiasthmatic; antiallergenic; antiinflammatory; cardiant; circulatory; antidiabetic; laxative; diagnosis; gene therapy; ss. BP. Mouse histamine H4 receptor cDNA (ORTH) ORTHO-MCNEIL PHARM INC AAI70981 standard; cDNA; 1176 22-FEB-2001; 2001WO-US005914. 31-MAY-2000; 2000US-0208260P. entry) (first Lovenberg T, Liu C; WPI; 2002-114339/15 WO200192485-A1. Mus musculus 18-MAR-2002 06-DEC-2001. AAI70981; AAI 70981

New mammalian histamine H4 receptor proteins and polynucleotides encoding the proteins, useful in gene therapy for treating diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. P-PSDB; AAM50565.

Claim 4; Fig 5A; 92pp; English.

The present sequence is that of a cDNA clone encoding a murine histamine receptor of the H4 subtype. The cDNA was isolated from a mouse spleen cDNA library. It shows 72.8% homology to the human H4 receptor coding region. The invention provides mammalian (human, mouse, rat and quined pig) histamine H4 receptor nucleic acid molecules (see AAI70980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host calls that produce active recombinant protein. The pharmacology of known histamine ligands is demonstrated. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of

The present sequence is that of a cDNA clone encoding a rat histamine receptor of the H4 subtype. The CDNA was isolated from a rat spleen CDNA library. It shows 72.5% homology to the human H4 receptor coding region. The invention provides mammalian (human, mouse, rat and guinea pig) histamine H4 receptor nucleic acid molecules (see AA770980-83) and polypeptides (see AA770980-83) and recombinant host cells that produce active recombinant protein. The pharmacology of known histamine H4 receptor may be used in gene therapy for the treatment of histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant protein is useful for identifying modulators of the mammalian histamine H4 receptor. Such modulators may be useful for diagnosing, treating or preventing asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is that of mouse histamine H4 receptor gene specific primer P2, which was used with an adaptor primer (see AA170990) in a 3' ARCE amplification of mouse spleen cDNA. Full-length cDNA (see AA170991) encoding mouse H4 (see AAN50565) was subsequently obtained. The invention provides mammalian histamine H4 receptor nucleic acid molecules and polypeptides. The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant H4 receptor protein can be used to identify modulators of activity for use in the treatment of asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent
                                                                                                                                                                                                               289

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of mouse histamine H4 receptor gene specific primer P1, which was used with an adaptor primer (see AAI70990) in a 5' ARCB amplification of mouse spleen cDNA. Full-length cDNA (see AAI70981) encoding mouse H4 (see AAMF0565) was subsequently obtained. The invention provides mammalian histamine H4 receptor nucleic acid molecules and polypeptides. The nucleic acids have been expressed in recombinant host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            H4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is that of a cDNA clone encoding guinea pig
histamine receptor of the H4 subtype. The cDNA was isolated from a bone
marrow cDNA library. It shows 75.6% homology to the human H4 receptor
coding region. The invention provides mammalian (human, mouse, rat and
coding region. The invention provides mammalian (human, mouse, rat and
coding region. The invention provides mammalian (human, mouse, rat and
coding region. The pivention provides manucle: a caid molecules (see AAI70980-
coding region. The pharmacology of known histamine liquads is demonstrated.
Mammalian histamine H4 receptor may be used in gene therapy for the
reatment of diseases where it is beneficial to elevate mammalian
chistamine H4 receptor activity. Recombinant protein is useful for
identifying wodulators of the mammalian histamine H4 receptor. Such
codulators may be useful for diagnosing, treating or preventing asthma,
allergy, inflammation, cardiovascular and cerebrovascular disorders, non-
insulin dependent diabetes mellitus, hyperglycemia, constipation,
arrhythmia, disorders of the neuroendocrine system, stress and spasticity

New mammalian histamine H4 receptor proteins and polynucleotides encoding the proteins, useful in gene therapy for treating diseases where it is beneficial to elevate mammalian histamine H4 receptor activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of the forward primer used, with the reverse primer given in AAI7094, in the PCR amplification of mouse spleen cDNA. The coding region (see AAI70981) of mouse histamine H4 receptor cDNA was obtained. The PCR product was cloned into mammalian expression vector polNeo. The invention provides mammalian histamine H4 receptor nucleic acid molecules (see AAI70980-83) and polypeptides (see AAM50564-67). The nucleic acids have been expressed in recombinant host cells that produce active recombinant protein. Mammalian histamine H4 receptor may be used in gene therapy for the treatment of diseases where it is beneficial to elevate mammalian histamine H4 receptor activity. Recombinant H4 receptor protein can be used to identify modulators of activity for use in the treatment of asthma, allergy, inflammation, cardiovascular and cerebrovascular disorders, non-insulin dependent diabetes mellitus, hyperglycemia, constipation, arrhythmia, disorders of the neuroendocrine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Farnesyl transferase inhibitor modulated leukemia associated gene #700.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ss; cytostatic; farnesyl transferase inhibitor; gene expression; quinolinone; leukemia; cancer.

                                                                                                                                                                                                                                                                            methyl-2-(1H)quinolinone, monitoring the therapy of a patient, treating a patient with leukemia with FTI if the analysis indicates that the patient
                                                                                                                                                                                                                                                                                                       corresponds to a gene whose expression may be
                                                                                                                                                                                                The invention relates to a method of determining whether a patient will respond to treatment with a farnesyl transferase inhibitor (FTI), by analyzing the expression of gene that is differentially modulated in the presence of an FTI. The method is useful for determining whether a patient will respond to treatment with a FTI such as (B)-6-[amino(4-chlorophenyl)(1-methyl-1H-imidazol-5-yl)methyl]-4-(3-chlorophenyl)-1-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; G protein-coupled receptor; GPCR; ds; GAL4; galanin receptor; Albabamer's disease; amyotrophic lateral sclerosis; sathma; atherosclerosis; basal cell carcinoma; breast carcinoma; chronic obstructive pulmonary disease; Crohn's disease; chondrosarcoma; chronic obstructive pulmonary disease; Crohn's disease; monomic obstructive pulmonary disease; crohn's disease; multiple sclerosis; osteoarthritis; osteoporosis; parkinson's disease; psoriasis; rheumatoid arthritis; schizophrenia; ulcerative colitis;

The invention relates to an isolated polypeptide encoded by a nucleic acid molecule that is at least 80% identical to the G protein-coupled (GGPCR) polypuclochided in the specification. Also included are probes based on the GPCR sequences (including antiennse probes), a host cell comprising an expression vector comprising the GPCR sequence, antibodies raised against the polypeptides are useful for cepressors, against the polypeptides are useful for identifying modulators compounds which function as modulators, activators, crepressors, against the polypeptides and mucleic acid probes as including the GAL4 polypeptide. The antibodies and nucleic acid probes as confined above can be used to detect the presence of the polypeptides of and nucleic acids and are used to disgnose a variety of disease.

CC described above can be used to detect the presence of the polypeptides and nucleic acids and are used to disgnose a variety of disease.

CC disorders in which GPCRs are involved e.g., Alzheimer's disease or disorders in which GPCRs are involved e.g., Alzheimer's disease.

CC arctinoma, breast carcinoma, cardiomyopathy, chondrosarcoma, chronic obstructive pulmonary disease, Crohn's disease, depression, epilepsy, macular degeneration, lymphoma, melanoma, multiple sclerosis, rheumatoid costeoarthritis, schizophrenia, ulcerative colitis, tuberculosis and many other diseases listed in the specification. The probes and antibodies are also carthritis, schizophrenia, ulcerative colitis, tuberculosis and many other diseases or increase the expression of galanin receptor (GAL4) can called the treat obseity, diabetes, hyperlipidaemia and stroke. The decrease or increase the expression of galanin receptor (GAL4) can be used to treat obseity, diabetes, hyperlipidaemia and stroke. The their by an order is a novel GPCR polynucleotide of the their by an order of the box when the content of the present sequence is a novel GPCR polynucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ·

```
Novel splice variants of human H4 histamine receptor, H4b and H4c, useful for identifying agonists or antagonists of the receptor which are useful for treating multiple sclerosis, asthma, allergy, psoriasis and stroke.
                                                                                                                                                                                                                                                                                                                   The invention relates to splice variants of human H4 histamine receptor, H4b and H4c. The invention is useful for identifying an agonist, antagonist or inverse agonist of a mammalian histamine receptor. The agonist, antagonist or inverse agonist of H4b and H4c is useful for treating inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infarction, migraine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, or psoriasis. The present sequence is human H4c DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; H4; histamine receptor; inflammatory bowel disease; psoriasis; atopic dermatitis, stroke; myocardial infarction; migraine; allergy; chronic obstructive pulmonary disease; COPD; cerebroprotective; therapy; rheumatoid arthritis; multiple sclerosis; inflammation; neuroprotective;

                                                                                                                                                                                                                                                                                                                                                                   Novel splice variants of human H4 histamine receptor, H4b and H4c, useful for identifying agonists or antagonists of the receptor which are useful for treating multiple sclerosis, asthma, allergy, psoriasis and stroke.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; H4; histamine receptor; inflammatory bowel disease; psoriasis; atopic dermatitis; stroke; myocardial infarction; migraine; allergy; chronic obstructive pulmonary disease; COPD; cerebroprotective; therapy; rheumatoid arthritis; multiple solerosis; inflammation; neuroprotective; asthma; receptor; variant; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to splice variants of human H4 histamine receptor, H4b and H4c. The invention is useful for identifying an agonist, antagonist or inverse agonist of a mammalian histamine receptor. The agonist, attagonist or inverse agonist of H4b and H4c is useful for treating inflammation, asthma, allergy, atopic dermatitis, stroke, mycoardial infarction, migraine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, or psoriasis. The present sequence is human H4b DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ;

                                                                                                                                                                                                                ó
                           Novel splice variants of human H4 histamine receptor, H4b and H4c, useful for identifying agonists or antagonists of the receptor which are useful for treating multiple sclerosis, asthma, allergy, psoriasis and stroke.
                                                                                                                                                                                                                                                                                                                                                                            Human; G protein coupled receptor; GPCR; transmembrane receptor; identification; agonist; screening; therapeutic; pharmaceutical; mutant;
                                                                                    The invention relates to splice variants of human H4 histamine receptor,
                                                                                          HAD and HAC. The invention is useful for identifying an agonist, antagonist or inverse agonist of a mammalian histamine receptor. The agonist, antagonist or inverse agonist of H4b and H4c is useful for treating inflammation, asthma, allergy, atopic dermatitis, stroke, myocardial infarction, migraine, chronic obstructive pulmonary disease (COPD), rheumatoid arthritis, multiple sclerosis, inflammatory bowel disease, or psoriasis. The present sequence is human H4 receptor DNA

The present invention describes transmembrane receptors, preferably human G protein coupled receptors (GPCR), for which the endogenous ligand is unknown (orphan GPCR receptors). More specifically the present invention relates to non-endogenous, constitutively activated versions of a human GPCR. These non-endogenous human GPCRs can be useful for the direct identification of candidate compounds as receptors agonists, inverse agonists or partial agonists for use as pharmaceutical agents. AAA46017 to AAA46126 and AAB02825 to AAB02859 represent sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            screening receptor,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; orphan G protein-coupled receptor; GPCR; hRUP7; drug screening;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0
                                                                                                                                                                                                                                                                                                                                                               The present sequence is a cDNA encoding hRUP7, an endogenous human orphan G protein-coupled receptor (GPCR). The full length hRUP7 cDNA was cloned by RT-PCR using human peripheral leucocyte cDNA as template. The orphan GPCR of the invention, like all GPCRs has seven transmembrane alpha helices with an extracellular N-terminus and an intracellular C-terminus. However, no endogenous ligands has yet been identified for the proteins of the invention. The orphan GPCRs may be used in the identification of their rendogenous ligands, and to screen potential GPCR agonists and antagonists for use as pharmaceutical agents. The proteins may also be used in the study of GPCR-mediated signalling cascades, and to elucidate their precise role in normal and diseased human conditions. Nucleic acid encoding human orphan GPCRs may be used for tissue localisation expression analysis to provide information about their function in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              G-protein coupled receptor; GPCR; PFI-013; antiallergic; antiasthmatic; antiinflammatory; vasotropic; antidiabetic; anorectic; cytostatic; human;

This cDNA of NCIMB 41073 encodes a human G-protein coupled receptor (GPCR) like polypeptide, designated PFI-013. The PFI-013 protein can be expressed by standard recombinant methodology. Antibodies and modulators of PFI-013 are useful in the manufacture of a medicament for treating allergic disorder, including extrinsic asthma, immunological disorders, such as intrinsic asthma, vaculitic granulomatous disease, interstitial and other pulmonary disease, including chronic obstructive pulmonary disease (COPD), infectious, inflammatory disease, such as inflammatory bowel diseases (COPD), infectious, inflammatory disease, such as inflammatory calso useful for treating obesity, diabetes, metabolic, neurological diseases, psychotherapeutics, urogenital disease, reproduction and sexual medicine, inflammation, cancer, tissue repair, dermatology, photoageing, skin pigmentation, osteoporosis, cardiovascular, gastrointestinal diseases, allergy and respiratory disease, sensory organ disorders, sleep disorders and hair loss. The PPI-013 protein and nucleic acid are useful the diagnosis and treatment of the above conditions and also for similal treatment of diseases associated with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               0;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New G-protein coupled receptor-like polypeptide, polynucleotide for screening drug candidates for treating diseases associated with signal transduction e.g. allergic, inflammatory, pulmonary, neoplastic diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         signal transduction. The antibodies are also useful for enrichment of eosinophils from mammalian, especially human blood and for detecting the

treating cancer, autoimmune, pulmonary, cardiovascular and neurological disorders and for identifying modulators useful for treating asthma. Novel G-protein coupled receptor polypeptide and polynuclectide for

Claim 2; Page 49-50; 54pp; English.

The invention relates to the human G protein-coupled receptor AXOR35 (AAB73621), to cDNA encoding AXOR35 (AAH24006), and to AXOR35 fragments and variants. Like all G protein-coupled receptors, AXOR35 has 7 putative transmembrane domains and is involved in signal transduction. AXOR35 has homology and structural similarity with G protein-coupled receptors such as the human histamine H3 receptor. The invention also relates to expression vectors and host cells comprising AXOR35 DNA, to recombinant expression of AXOR35, and to an AXOR35-specific antibody. AXOR35 proteins and nucleotides may be used to treat a wide variety of disorders including bacterial, fungal, protozoal and viral infections, particularly H1V-1 or H1V-2 infections; pain; cancers; benign prostatic hypertrophy; diabetes; obesity; anorexia; bulimia; osteoporosis; asthma; allergies; urinary retention; cute heart failure; hypotenalon; hypertension; angina homoroxis; manners mirasine, required magina pectoris; myocardial infanction; stroke; ulcers; migraine; vomiting; pectoris; myocardial infanction; stroke; ulcers; migraine; vomiting; psychotic and neurological disorders such as anxiety, schizophrenia, man depression, depression, delirium, demential, and severe mental retardation, and dyskinesias, such as Parkinson's disease, Huntington's disease or Gilles de la Tourette's syndrome, AXOR35 proteins and nucleotides are useful as vaccines, and AXOR35 proteins and antibodies may be used in screening compounds for their ability to modulate AXOR35 activity or expression. Such AXOR35 modulators are particularly useful for treating asthma, and inhibiting or promoting the function of lymphocytes, macrophages, eosinophils or neutrophils in asthmatic lung. AXOR35 proteins, nucleotides and antibodies are also

disease via the detection of abnormal levels of protein or mRNA, or via the detection of mutations in the corresponding gene. AXOR35 proteins are also useful for inducing an immunological response in a mammal against the above diseases, and for antibody production. AXOR35 nucleotides also useful as diagnostic reagents, in chromosome localisation and expression studies, and for producing transgenic animals useful in drug discovery. AXOR35-specific antibodies are useful for purifying the AXOR35 protein or fragments thereof, and are also useful for treating conditions sequence represents cDNA encoding human AXOR35 protein. The present diagnosing or determining susceptibility of an individual to a $\begin{array}{c} \mathbb{S} \times \mathbb{$
